

Task 1: this plot is trying to show the growth in car exports for 4 regions during the years 1927, 1928, and 1929. Besides being rather racially insensitive (the plot was made back in the 70s), the plot is rather misleading. What is misleading about it, i.e., fundamental flaw(s) exist in how this data is being presented? Create plot that provides a much improved way of presenting the data below this plot (or on the next page).

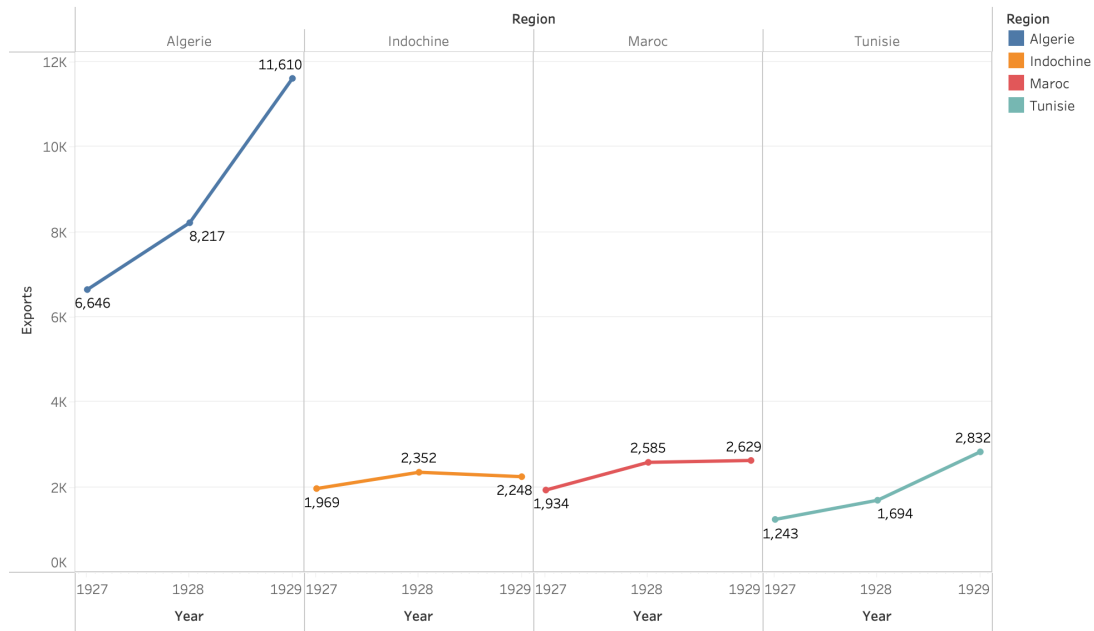

Note: the numbers, as far as I can tell from the resolution plot, read (from left to right)
1969, 2352, 2248, 1934, 2585, 2629, 1243, 1694, 2832, 6646, 8217, 11610

Explanation: This plot is really bad for a couple of reasons. One, it is insensitive to other groups of people which is unacceptable. Second, the years are not labeled, so no one knows which year goes with what value. The six second rule is completely violated in this graphic as it is just so much information process.

Remake:

Algerie skyrockets in the amount of exports from 1927-1929

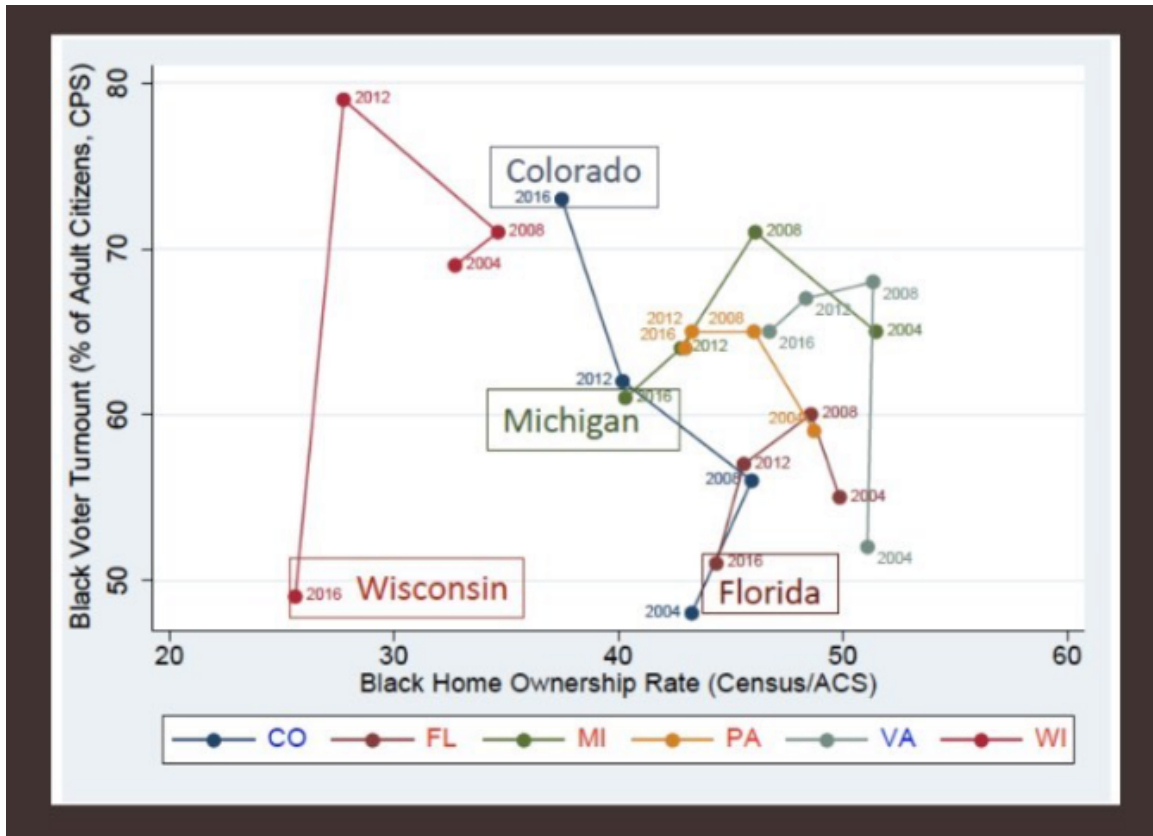

The trend of sum of Exports for Year broken down by Region. Color shows details about Region. The marks are labeled by sum of Exports.

Task 2:

the following plot is trying to show a few things:

- How Black Home Ownership has changed over time (2004-2016)
- How Black Voter Turnout has changed over time (2004-2016)
- How these two quantities are related.
- How these quantities and their relationship differ across six states.

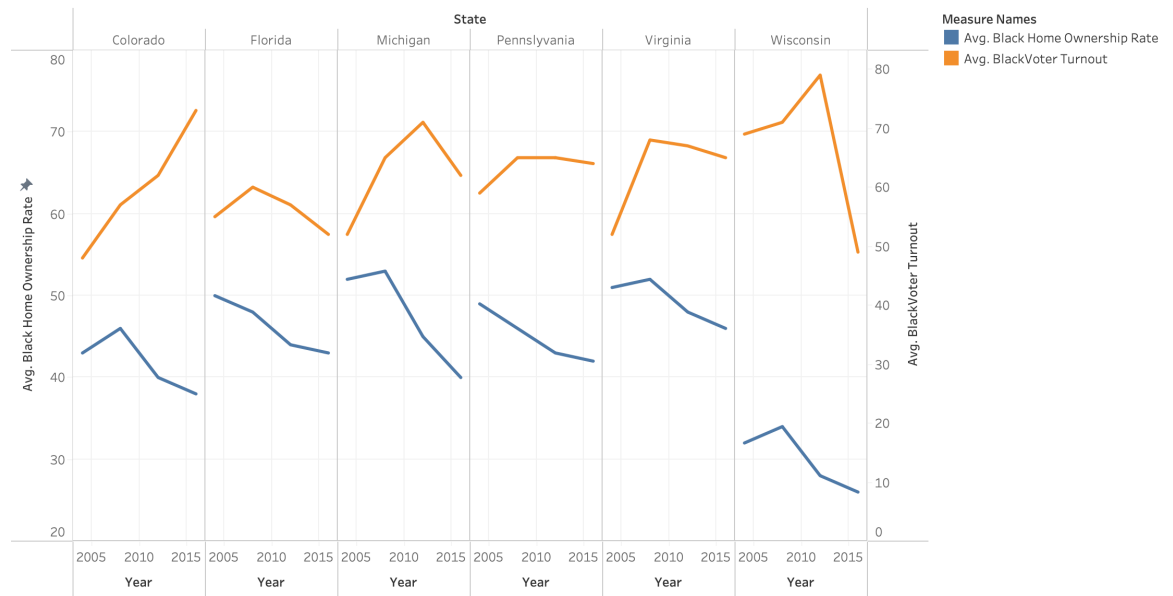

It's a mess.

Create a plot (or two, or three...however many is necessary) that provides a much improved way of presenting the data. Copy/paste into this document. **Mine is down below.**

Remake:

Black home ownership and voter turnout changing over time in multiple states

The trends of Avg. Black Home Ownership Rate and Avg. BlackVoter Turnout for Year broken down by State. Color shows details about Avg. Black Home Ownership Rate and Avg. BlackVoter Turnout.
